

OPERATOR'S MANUAL & SALES AND ENGINEERING DATA

INCLUDING: SPECIFICATIONS, SERVICE KITS, GENERAL INFORMATION, TROUBLESHOOTING.
INCLUDE MANUALS: AF106X-XX Air Motor (pn 97999-1473), 66236-XXX-B Lower Pump End (pn 97999-489)
& S-632 General Information Manual (pn 97999-624).

RELEASED: 8-16-10
REVISED: 2-10-10
(REV. 02)

10" AIR MOTOR
20:1 RATIO
6" STROKE

AF1020SXXXXXX-XX-X EXTRUSION PUMP SERIES Carbon Steel

**READ THIS MANUAL CAREFULLY BEFORE INSTALLING,
OPERATING OR SERVICING THIS EQUIPMENT.**

It is the responsibility of the employer to place this information in the hands of the operator. Keep for future reference.

SERVICE KITS

- Use only genuine ARO® replacement parts to assure compatible pressure rating and longest service life.
- **637489** for repair of air motor section.
- **637128-XX4-B** for repair of lower pump end. Refer to the chart on page 2 for description of -XXX options.

SPECIFICATIONS

Model Series (refer to option chart)	AF1020SXXXXXX-XX-X
Pump Type	Air Operated, Extrusion Double Acting Pump
Ratio	20:1
Air Motor	AF1060-XX
Motor Repair Kit	637489
Motor Diameter	10" (25.4 cm)
Stroke (double acting)	6" (15.2 cm)
Air Inlet (female)	3/4 - 14 N.P.T.F. - 1
Air Exhaust (female)	1-1/4 - 11-1/2 N.P.S.M.
Lower Pump End Series	66236-XXX-B
Lower Pump Repair Kit	637128-XX4-B
Material Outlet (female)	1-1/2 - 11-1/2 N.P.T.F. - 1
Weight	144 lbs (65.3 kgs)

PUMP PERFORMANCE

Air Inlet Pressure Range	30 - 90 p.s.i.g. (2.1 - 6.2 bar)
Fluid Pressure Range	600 - 2250 p.s.i.g. (41.4 - 155.2 bar)
Maximum Rec'd Cycles / Minute	70
Displacement In.³ Per Cycle	40.4
Volume / Cycle	22.4 oz. (661.8 ml)
Cycles Per Gallon	5.7
Flow @ 70 Cycles / Minute	12.2 g.p.m. (46.3 l.p.m.)
Noise Level @ 60 p.s.i. - 40 c.p.m.	89.8 db(A)*

* The pump sound pressure level has been updated to an Equivalent Continuous Sound Level (LAeq) to meet the intent of ANSI S1.13-1971, CAGI-PNEUROP S5.1 using four microphone locations.

PUMP DATA

IMPORTANT

This is one of four documents which support the pump. Replacement copies of these forms are available upon request.

PUMP OPTION DESCRIPTION CHART

	Pump Model	Lower Pump End	Lower End Repair Kit
Packing Material	AF1020S11XXXX-X Air Motor Option Plunger Type Spring Type Lower Packing Material Upper Packing Material	66236-XXE-B Spring Type Packing Material	637218-XX4-B Spring Type Packing Material
	Glass filled PTFE (upper) Glass filled PTFE (lower)	KK	3
	UHMW-PE (upper) UHMW-PE (lower)	FF	C
	UHMW-PE / Leather Staggered (upper) UHMW-PE (lower)	HF	F
	Polyurethane (upper) UHMW-PE (lower)	PF	J
	UHMW-PE / Glass filled PTFE Staggered (upper) UHMW-PE (lower)	GF	P
	Glass filled PTFE / UHMW-PE Staggered (upper) Glass filled PTFE (lower)	RK	R

Spring Type

No Spring	1	3	3
Multiple Wave Spring	4	4	4
No Spring with Alternate Solvent Cup	A	8	3
Multiple Wave Spring with Alternate Solvent Cup	D	9	4

Plunger Type

Carbon steel with Hard Chrome Plating	4	E	E
---------------------------------------	---	---	---

Air Motor Option

No Option		N/A	N/A
Intergrated Ball Valve Regulator	1	N/A	N/A

DIMENSIONS

GENERAL DESCRIPTION

The chop-check pumps are primarily designed for the pumping of heavy viscous material with or without fibrous content. The models can be used with a gravity feed single post lift as a topper type assembly or with a two post lift as a force feed type assembly. The lower pump is designed for easy priming and the double acting feature is standard in all ARO industrial pumps. Material is delivered to the pump discharge outlet on both the up and down stroke.

The motor is connected to the lower pump end by a spacer section. This allows for lubrication of the upper packing gland and prevents motor contamination because of normal wear and eventual leakage through the material packing gland. Be sure the solvent cup is adequately filled with lubricant to protect the upper packings and insure longest service life.

⚠ WARNING HAZARDOUS PRESSURE. Do not exceed maximum operating pressure of 2250 p.s.i. (155.2 bar) at 90 p.s.i. (6.3 bar) inlet air pressure.

Pump Ratio X Inlet Pressure to Pump Motor	=	Maximum Pump Fluid Pressure
--	---	--------------------------------

Pump ratio is an expression of the relationship between the pump motor area and the lower pump end area. EXAMPLE: When 150 p.s.i. (10.3 bar) inlet pressure is supplied to the motor of a 4:1 ratio pump, it will develop a maximum of 600 p.s.i. (41.4 bar) fluid pressure (at no flow) - as the fluid control is opened, the flow rate will increase as the motor cycle rate increases to keep up with the demand.

⚠ WARNING Refer to general information sheet for additional safety precautions and important information.

NOTICE: Thermal expansion can occur when the fluid in the material lines is exposed to elevated temperatures. Example: Material lines located in a non-insulated roof area can warm due to sunlight. Install a pressure relief valve in the pumping system.

Replacement warning label (pn 92325) is available upon request.

TROUBLE SHOOTING

Pump problems can occur in either the air motor section or the lower pump end section. Use these basic guidelines to help determine which section is affected.

Pump will not cycle.

- Be certain to first check for non-pump problems including kinked, restrictive or plugged inlet / outlet hose or dispensing device. Depressurize the pump system and clean out any obstructions in the inlet / outlet material lines.
- Refer to the motor manual for trouble shooting if the pump does not cycle and / or air leaks from the air motor.
- Damaged motor. Service the motor.

Pump cycles but does not deliver material.

- Refer to the lower pump end manual for further trouble shooting.

PUMP CONNECTION - UPPER / LOWER

NOTE: All threads are right hand.

1. Lay the pump assembly on a work bench.
2. Remove the three (Y6-128-C) cap screws and (Y14-750-K) lock washers from the three spacer rods (see figure 1).
3. Pull the air motor from the lower pump end until the motor piston rod is in the "down" position and the lower pump end rod is in the "up" position.
4. Remove the three spacer rods by removing the three (Y6-128-C) cap screws and (Y14-750-K) lock washers.
5. Using e-ring pliers, slide the "e" ring up far enough to allow the sleeve to move upward and release the two connectors (see figure 2).

Figure 2

REASSEMBLY

1. Align the pump motor with the lower pump end. Position the air inlet of the motor 120° from the material outlet.
2. Install the two connectors (94688) and retain with the sleeve (94689). Slide the "e" ring (95069) back into position.
3. Assemble the three spacer rods (93866) to the lower pump and secure using three (Y14-750-K) lock washers and (Y6-128-C) cap screws.
4. Reinstall the spacer rods to the pump motor.
5. Bring the motor and lower pump together and retain with three (Y14-750-K) lock washers and (Y6-128-C) cap screws.
