TWO BALL PUMP SERIES

400 SERIES STAINLESS STEEL

**READ THIS MANUAL CAREFULLY BEFORE INSTALLING,
OPERATING OR SERVICING THIS EQUIPMENT.**

It is the responsibility of the employer to place this information in the hands of the operator. Keep for future reference.

SERVICE KITS

- Use only genuine ARO® replacement parts to assure compatible pressure rating and longest service life.
- **637450** for repair of hydraulic motor section.
- **637211-XX3** for repair of lower pump section. Refer to the chart on page 2 for description of -XXD options.

SPECIFICATIONS

Model Series (refer to option chart)	650940-XXD-B
Type	Hydraulic Operated, Two-Ball Double Acting Pump
Ratio	0.8:1
Hydraulic Motor	67314-B
Motor Repair Kit	637450
Motor Size	4.125 sq." (26.6 sq. cm)
Stroke	6" (15.2 cm)
Hydraulic Inlet (female)	1/2 - 14 N.P.T.F. - 2
Hydraulic Return (female)	3/4 - 14 N.P.S.M.
Lower Pump End Series	66941-XXD
Lower Pump Repair Kit	637211-XX3
Material Inlet (male)	2 - 11-1/2 N.P.T.F. - 1
Material Outlet (female)	1-1/4 - 11-1/2 N.P.T.F. - 1
Weight	140 lbs (63.5 kgs)

PERFORMANCE

Hydraulic Inlet Pressure Range	50 - 2000 p.s.i. (3.4 - 137.9 bar)
Fluid Pressure Range	40 - 1600 p.s.i. (2.8 - 110.3 bar)
Maximum Rec'd Cycles / Minute	50
Displacement In³ Per Cycle	59.6
Volume / Cycle	33.0 oz. (976.3 ml)
Cycles Per Gallon	3.9
Flow @ 50 Cycles / Minute	12.9 g.p.m. (48.8 l.p.m.)
Noise Level	N/A

PUMP DATA

MODEL 650940-XXD-B

PUMP OPTION DESCRIPTION CHART

650940 - X X D - B

PACKING MATERIAL

—

SPRING ARRANGEMENT

—

PLUNGER TYPE

—

PACKING MATERIAL (packings are upper and lower unless noted)

- C UHMW-PE
- K Carbon-Graphite filled PTFE
- L Mineral filled PTFE
- P UHMW-PE / PTFE staggered (upper) / UHMW-PE (lower)
- R PTFE / UHMW-PE staggered (upper) / Mineral filled PTFE (lower)

SPRING ARRANGEMENT

- 6 Wave spring
- D Wave spring with alternate seat material

PLUNGER TYPE

- D Hardened stainless steel with hard chrome plating

GENERAL DESCRIPTION

⚠ WARNING HAZARDOUS PRESSURE. Do not exceed maximum operating pressure of 1600 p.s.i. (110.3 bar) at 2000 p.s.i. (137.9 bar) inlet hydraulic pressure.

**PUMP RATIO X
INLET PRESSURE TO PUMP MOTOR = MAXIMUM PUMP
FLUID PRESSURE**

Pump ratio is an expression of the relationship between the pump motor area and the lower pump end area. **EXAMPLE:** When 90 p.s.i. (6.2 bar) inlet pressure is supplied to the motor of a 5:1 ratio pump it will develop a maximum of 450 p.s.i. (31.0 bar) fluid pressure (at no flow) – as the fluid control is opened, the flow rate will increase as the motor cycle rate increases to keep up with the demand.

⚠ WARNING Refer to general information sheet for additional safety precautions and important information.

- The two-ball pumps are primarily designed for the high volume transfer of light and medium viscosity fluids compatible with 400 series stainless steel. The lower pump is designed for easy priming and the double acting feature is standard in all ARO industrial pumps. Material is delivered to the pump discharge outlet on both the up and down stroke.
- The motor is connected to the lower pump end by a spacer section. This allows for lubrication of the upper packing gland and prevents motor contamination because of normal wear and eventual leakage through the material packing gland. Be sure the solvent cup is adequately filled with lubricant to protect the upper packings and insure longest service life.

TROUBLE SHOOTING

Pump problems can occur in either the hydraulic motor section or the lower pump end section. Use these basic guidelines to help determine which section is affected.

If the pump will not cycle.

- Be certain to first check for non-pump problems including kinked, restrictive or plugged inlet / outlet hose or dispensing device. Depressurize the pump system and clean out any obstructions in the inlet / outlet material lines.
- Refer to the motor manual for trouble shooting if the pump does not cycle and / or hydraulic fluid leaks from the hydraulic motor.

If the pump cycles but does not deliver material.

- Refer to the lower pump end manual for further trouble shooting.

PUMP CONNECTION – UPPER / LOWER

NOTE: All threads are right hand.

1. Lay the pump assembly on a workbench.
2. Remove the top three (Y6-130-C) cap screws and (Y14-750-K) lockwashers from the three spacer rods (figure 1).
3. Pull the hydraulic motor from the lower pump end until motor piston rod is in the “down” position and lower pump end rod is in “up” position.
4. Using e-ring pliers, slide the “e” ring up far enough to allow the sleeve to move upward and release the two connectors (figure 2).

PUMP CONNECTOR DETAIL

Figure 2

REASSEMBLY

1. Align the pump motor with the lower pump end. Position the hydraulic inlet 95° from the material outlet.
2. Install the two connectors and retain with the sleeve, slide the “e” ring back into position.
3. Reinstall the spacer rods to the pump motor.
4. Bring the motor and lower pump together and retain with the three (Y14-750-K) lockwashers and (Y6-130-C) cap screws.
